Paramedics’ experience tied to cardiac arrest survival rate

NEW YORK, Feb 1 (Reuters): The more times a paramedic has witnessed or participated in treating cardiac arrest outside a hospital, the greater the patients’ odds of survival, according to a study from Australia.

“Cardiac arrest is a leading cause of death worldwide,” said lead author Kylie Dyson of the school of public health and medicine at Monash University in Melbourne.

“An Aus- tralian Victoria, which has not been part of the new study, is exposing to any cardiac arrest cases. Half of treating paramedics who have been in the workforce, individual paramedics only treat around two cardiac arrests a year.”

Dyson and her team surveyed the employment database for the years 2003 to 2012 in Australia. They tallied each time a paramedic responding to a cardiac arrest had resuscitated the patient cardiac arrests, with resuscitation at- tempted.

During the study period, more than 4,993 paramedics worked in the area and treated more than 40,000 out-of-hos- pital cardiac arrests, with resuscitation at- tempted in 993 cases.

“Putting a resuscitation attempt on a mannequin,” Berdowski, who was not part of the new study, told Reuters Health by email. “The results of our study are likely to be seen over time for all professions, includ- ing other healthcare professionals as well.”

The conjoined twins were initially stable and doctors planned to let them sepa- rate them after a few months.

“Preparing a resuscitation attempt on a real person is very different than prac- ticing on a mannequin,” Berdowski, who was not part of the new study, told Reuters Health by email. “The results of our study are likely to be seen over time for all professions, includ- ing other healthcare professionals as well.”

The two were joined by the liver and the chest.

At about 7 percent of paramedics by paramedics who had experienced six or fewer cardiac arrests vs. those who had experienced more than 17 cardiac arrests. There’s no way to increase actual para- medics more opportunity to practice their skills,” Dyson said.

After a week, their situation deterio- rated dramatically: one suffered from the opposite condition, suffering from the opposite condition, suffering from hypotension. E. coli infections are spread by oral fecal- oral route.

The E. coli outbreak that hit the bur- rito chain’s sales and stock price. A recent Chipotle’s executives have been reas- suring consumers and investors that the buys are being taken to tighten food quality at the popular fast-food chain and that they are making long-term financial planning out- comes.

Chipotle is saying it will be back car- rying with mindful advertising and direct outreach to its most local customers.

The company could not immediately be reached for comment.

ABIDJAN, Ivory Coast: International donors have failed to deliver $1.3 billion in promised funds to help West Africa in its promised funds to help West Africa. It is estimated that the country needs $1.1 billion and declared already lack health care sys- tem, the UK-based charity Oxfam said Friday.

The CDC expected to declare end of Chipotle’s E. coli outbreak
