LONDON, March 16, 2019

The recent results and the role that the new environmental bureau in Sichuan province has played in the fight against pollution have been widely commented. The bureau, which was launched five years ago in Henan province’s Longmen county, has helped to monitor pollution levels in the area.

“We have been working hard to control pollution in Sichuan,” said Leiming, mayor of the city of Pingdingshan in Henan province, which has struggled to find a balance between economic development and environmental protection. “We have made significant progress in reducing pollution levels, but we still need to do more to ensure that the environment is protected.”

However, some experts have criticized the bureau for not doing enough to prevent pollution. “The bureau has not been effective in controlling pollution levels,” said Yang Qing, a professor at the University of Science and Technology of China. “We need stronger measures to control pollution.”

The bureau has been forced to change its approach, with the government and businesses becoming more proactive in controlling pollution. “We have been working closely with businesses to reduce pollution levels,” said Leiming. “We have also been increasing investment in pollution control equipment.”

The bureau has also been working with local residents to improve their living conditions. “We have been providing education and training to residents on how to reduce pollution levels,” said Leiming. “We have also been encouraging residents to use less energy.”

Overall, the bureau has been successful in reducing pollution levels, but there is still work to be done. “We need to continue working hard to control pollution,” said Leiming. “We will not rest until we have reached our goals.”

Nonetheless, some experts have welcomed the bureau’s efforts. “The bureau is playing a vital role in controlling pollution,” said Peng Li, a professor at the University of Science and Technology of China. “We need to continue supporting the bureau and ensuring that it has the resources it needs to do its job.”

**Africa seeks new green dev model**

BARCELONA, March 16, 2019

African countries’ internal climate change, where every economic sector and activity is linked, the World Bank Group’s principal environmental management officer said today.

"As we look to the future, we must consider how we can transform our economies to be more sustainable and resilient to climate change," said Mary Robinson, UN special envoy on climate change.

"We need to invest in clean energy, forest protection and technology that can help us mitigate and adapt to the effects of climate change," she said.

"This is about more than just reducing greenhouse gas emissions. It’s about ensuring that we build back better," said Robinson.

"We need to think about how we can transform our economies to be more resilient to climate change," she said.

"We need to invest in clean energy, forest protection and technology that can help us mitigate and adapt to the effects of climate change," she said.

"This is about more than just reducing greenhouse gas emissions. It’s about ensuring that we build back better," she said.
